

Table of contents

P01-Isolated facilities for transgenic plant research-----	01
P02-Biosafety assessment of Phytase transgenic potato in isolated field trials -----	03
P03-Biosafety assessment of Phytase transgenic plants in isolated field trials-A case study of transgenic broccoli-----	05
P04-Screening of tissue- and/or stress-specific promoter from T-DNA insertion rice mutants-----	07
P05-Using rice TN67 T-DNA insertional mutagenesis flanking sequence for rice functional genomics research -----	09
P06-Functional analysis of rice expressed sequence tags induced by rice blast fungus, <i>Magnaporthe grisea</i> -----	11
P07-An automated system for EST functional analysis and its application in rice genes-----	13
P08-Applicability evaluation of gene prediction programs in DNA sequence structure of rice disease resistance genes -----	15
P09-Rapid DNA extraction from plant tissues for polymerase chain reaction -----	17
P10-The identification of transgenic papaya plants resistant to papaya ring spot virus by PCR analysis -----	19
P11-Establishment of detection techniques for the seedlings of genetically modified papayas by the polymerase chain reaction -----	21
P12-Establishment of detection and monitoring system for genetically modified papaya-----	23
P13-The research of pollen flow and molecular identification method for transgenic papaya -----	25

P14-Biosafety study of transgenic papaya DNA in soil environment -----	27
P15-Development of a pollen-mediated transformation method for moth orchids -----	29
P16-The assessment of the disease occurrence and pathogen flora on transgenic plants -----	31
P17-A sensitive DNA microchip array for simultaneous detection of two orchid viruses-----	33
P18-Molecular detection of foreign pigment gene-<i>Dihydroflavonol 4-reductase</i> in genetic transformed <i>Phalaenopsis</i> cultivars -----	35
P19-Development of <i>Agrobacterium rhizogenes</i>-mediated transformation system for <i>Salvia miltiorrhiza</i> -----	37
P20-Establishment hairy root culture system of <i>Salvia miltiorrhiza</i> -----	39
P21-Establishment hairy root culture system to produce secondary metabolites of <i>Salvia miltiorrhiza</i> -----	41
P22-Analysis of genetic similarity in selected peach cultivars and their hybrids by microsatellite DNA markers-----	43
P23-Molecular markers for fingerprinting among cultivars of oriental pear (<i>Pyrus pyrifolia</i> (Burm.) Nak.) -----	45
P24-Genetic variation of <i>Musa formosana</i> (Warb.) Hayata native in Taiwan using microsatellite marker-----	47
